Petitioner's Brief on Issues of Law for Phase 1 Tria	1     al   Case No. 19STCP0117

On November 1, 2021, after meeting and conferring with Cross-Defendants City of Ojai and Casitas Municipal Water District, Defendant and Cross-Complainant the City of San Buenaventura filed a Notice of Issues for Trial, setting forth five suggested issues to define the scope of the Adjudication to be determined at the Phase 1 Trial. City of San Buenaventura and City of Ojai were unable to agree to the phrasing of Issue 4; the parties' alternative phrasings are as follows:

## As stated by the City of San Buenaventura:

4. A determination of whether the Court may comprehensively adjudicate the four Ventura River Watershed groundwater basins and interconnected surface waters in one legal proceeding pursuant to Code of Civil Procedure section 832, *et seq*.

As stated by the City of Ojai:

4. A determination of whether, as a matter of law, the court may comprehensively determine rights to extract groundwater among all rights holders across four separate basins in one legal proceeding pursuant to Code of Civil Procedure section 830, *et seq*.

In accordance with the Court's October 29, 2021 Ruling and November 4, 2021 Amended Ruling, Petitioner Santa Barbara Channelkeeper submits this summary of law to assist the Court in considering Issue 4 to be heard in the Phase 1 trial scheduled for February 14, 2022.

I.

## Traditional Adjudication of Interconnected Surface and Groundwater

Whereas traditional common law instructs that a landowner holds title in fee simple to all
groundwater underlying their property to extract, consume, and store at will, in the early 1900s the
California Supreme Court began to modify overlying rights to account for the scarcity and value of
groundwater in the state. (See *Katz v. Walkinshaw* (1902) 70 P. 663, 665; *Burr v. Maclay Rancho Water Co.* (1908) 154 Cal. 428, 438.) The Court formulated a "correlative rights" doctrine applicable as
between overlying rightsholders analogous to that between riparian rightsholders, dictating that: "each
has a common and correlative right to the use of this water upon his land, to the full extent of his needs
if the common supply is sufficient, and to the extent of a reasonable share thereof if the supply is so
scant that the use by one will affect the supply of the others." (*Hudson v. Dailey* (1909) 156 Cal. 617,
625–626.) Contemporaneously, the Court recognized the hydrological interconnectivity of groundwater

Petitioner's Brief on Scope of Phase 1 Trial

with surface streams and declared the importance of determining "the relative rights of the owner of the non-riparian land containing percolating water, which feeds a surface stream, and those who have acquired riparian or prescriptive rights in said stream." (*Id.* at p. 628; see also *Montecito Valley Water Co. v. Santa Barbara* (1904) 144 Cal. 578, 588; *Verdugo Canon Water Co. v. Verdugo* (1908) 152 Cal. 655, 665; *Los Angeles v. Hunter* (1909) 156 Cal. 603, 609; *San Bernardino v. Riverside* (1921) 186 Cal. 7, 14.) The 1928 Constitutional amendment limiting all water rights in the state to reasonable and beneficial uses amplified the necessity for courts to comprehensively adjudicate, and retain jurisdiction to reevaluate, the relative needs, priorities, and reasonableness of beneficial uses of all users of a stream system and underlying groundwater. (See *Tulare Irrigation Dist. v. Lindsay-Strathmore Irrigation Dist.* (1935) 3 Cal.2d 489, 524–525; *Peabody v. Vallejo* (1935) 2 Cal.2d 351, 374–375; *Allen v. California Water & Tel. Co.* (1946) 29 Cal.2d 466, 485–486; *Pasadena v. Alhambra* (1949) 33 Cal.2d 908, 931, 937; *Tehachapi-Cummings County Water Dist. v. Armstrong* (1975) 49 Cal.App.3d 992, 1001–1002.)

Article X, Section 2 of the Constitution imposes the duty to ensure that water is not wasted, that its use is reasonable, and that public trust resources are protected. *Nat. Audubon Society v. Super. Ct.* (1983) 33 Cal.3d 419, 433–34. California's public trust doctrine further imposes "an affirmative duty to take the public trust into account in the planning and allocation of water resources." (*Id.* at p. 446.) The California Supreme Court has recognized that "[t]he objective of the public trust has evolved in tandem with the changing public perception of the values and uses of waterways" and that "the state is not burdened with an outmoded classification favoring one mode of utilization over another." (*Id.* at p. 434 [internal quotations omitted].) California's public trust doctrine has evolved to protect a "far broader" range of protected public trust uses, including "the right to hunt, bathe or swim, and the right to preserve [trust resources] in their natural state." (*Berkeley v. Superior Court* (1980) 26 Cal.3d 515, 521.) The California Supreme Court has held one of the most important public trust uses to be "the preservation of those lands in their natural state, so that they may serve as ecological units for scientific study, as open space, and as environments which provide food and habitat for birds and marine life, and which favorably affect the scenery and climate of the area." (*Marks v. Whitney*, 6 Cal.3d at pp. 259–260; see also *Environmental Law Foundation*, 26 Cal.App.5th at p. 853 ("The public trust doctrine . . . protects

the public's right to use, enjoy and preserve the Scott River in its natural state and as a habitat for fish" [internal punctuation omitted]).)

Accordingly, to meet their statutory and Constitutional duties, courts have consolidated the adjudication of multiple groundwater basins located within and contributing to the watershed of large stream systems. (See *Orange County Water Dist. v. Riverside* ("*Orange County*") (1959) 173 Cal.App.2d 137, 151–158, 174, review den. Oct. 15, 1959; *City of Barstow v. Mojave Water Agency* ("*City of Barstow*") (2000) 23 Cal.4th 1224, 1233–1235.) Both *Orange County* and *City of Barstow* involved adjudication areas coextensive with watersheds spanning thousands of square miles and encompassing multiple groundwater basins as defined by the Department of Water Resources in Bulletin 118. (See *Orange County, supra*, at pp. 152–153; *City of Barstow, supra*, at pp. 1233–1234.)

In describing the adjudication's hydrological complexity, comprising four distinct basins and marked by "protrusions of the bedrock, faults, relatively impervious zones or in some cases arbitrary lines," the *Orange County* court wrote, "any such subdivisions or further divisions are parts of the entire Santa Ana River system, and all the waters thereof, underground and surface alike, are part of one interconnected common supply." (173 Cal.App.2d at p. 153; see also *Central Basin Municipal Water Dist. v. Fossette* (1965) 235 Cal.App.2d 689, 697, 719.) In rejecting appellants' arguments that the 2000 square mile river system should not be adjudicated as a unified whole, the court observed, "[w]hether [the various basins are] to be taken as a series of lakes or one single stream, is more a question of the use of terms and of emphasis in points of view than of any dispute over the essential facts." (*Orange County, supra*, at p. 174.)

Likewise, the California Supreme Court described the "Mojave River Basin" as "approximately 3,600 square miles . . . divided into five hydrologic subareas," in which "[t]he groundwater and surface water . . . constitute a single interrelated source." (*City of Barstow, supra*, 23 Cal.4th at pp. 1233–1234.) In fact, the "Mojave Basin" as defined in the "Adjudicated Areas" layer of the SGMA Data Viewer<sup>1</sup> intersects with at least eight groundwater basins as defined in the "Bulletin 118 Groundwater Basins – 2018" layer. In accommodation of the scope of the adjudication area, the Court affirmed a negotiated

Petitioner's Brief on Scope of Phase 1 Trial

regionally-adapted physical solution, which "requires each subarea within the basin to provide a specific quantity of water to the adjoining downstream subarea." (Id. at p. 1235.) As recently as 2000, therefore, the Supreme Court approved a comprehensive adjudication including multiple distinct groundwater basins, even where adjustments to the physical solution must be made by "subarea," so long as they "constitute a single interrelated source." (See *id.* at p. 1234.) Here, protection of public trust resources mandates inclusion of all groundwater basins hydrologically connected to the Ventura River. II. Actions Relating to Groundwater Rights Under Code of Civil Procedure, sec. 830 et seq. 

Effective January 1, 2016, Code of Civil Procedure part 2, title 10, chapter 7 (§ 830 *et seq.*) governs judicial procedure for comprehensive groundwater adjudications in California. The statutory framework authorizes a court to "determine all groundwater rights of a basin, whether based on appropriation, overlying right, or other basis of right, and use of storage space in the basin." (Code Civ. Pro., § 834, subd. (a).) Section 841, subdivision (a) instructs that "Except as otherwise provided in this section, the boundaries of the area subject to a comprehensive adjudication shall be consistent with the boundaries of a basin," as identified and defined by the Department of Water Resources ("DWR") in Bulletin 118.<sup>2</sup> Subdivision (b) allows a court discretion to revise basin boundaries, in the interests of justice, if the DWR revises basin boundaries after the adjudication has been initiated. Under subdivision (c), a court may direct either a party, special master, or the State Water Resources Control Board acting as referee to petition the DWR to revise basin boundaries upon a showing that doing so would "further a fair and effective determination of water rights." A DWR determination on such a request is subject to judicial review in traditional mandamus, coordinated with the comprehensive adjudication. (Code Civ. Pro., § 841, subd. (d).)

As yet, no case law exists interpreting any of these provisions. However, section 830, subdivision (b) instructs that they "shall be applied and interpreted consistently with," *inter alia*: "(1) Protecting water rights consistent with Section 2 of Article X of the California Constitution; (2) Conducting a comprehensive adjudication in a manner that promotes efficiency, reduces unnecessary delays, and provides due process; (3) Encouraging the compromise and settlement of comprehensive

<sup>2</sup> Available at <u>https://data.cnra.ca.gov/dataset/calgw\_update2020/</u>.

adjudications; (4) Conducting a comprehensive adjudication in a manner that is consistent with the achievement of groundwater sustainability within the timeframes of the Sustainable Groundwater Management Act; (5) Establishing procedures by which courts may conduct comprehensive determinations of all rights and priorities to groundwater in a basin. . . ." Notably, section 830, subdivision (b)(7) specifies that "this chapter shall not alter groundwater rights or the law concerning groundwater rights," except as provided in that paragraph regarding priority of unexercised rights. The bulk of groundwater rights and the law concerning them having been ascertained through case law, Code of Civil Procedure sections 830 *et seq.* must be read to reaffirm rather than supplant substantive rulemaking from the courts.

## III. Conclusion

Code of Civil Procedure sections 830 *et seq.* specify that the recently enacted statutory framework "shall not alter . . . the law concerning groundwater rights." (Code Civ. Pro. § 830, subd. (b)(7).) Historical case law is definitive in its approval of comprehensive adjudication of multiple distinct groundwater basins in one legal proceeding. Protection of public trust resources in the Ventura River, including specifically Federally Listed Endangered Southern California Steelhead, requires inclusion of all hydrologically connected groundwater basins in a comprehensive adjudication of surface and groundwater rights. Questions of the relative impact of groundwater pumping on river flows can and will be addressed during the second, phase 2 trial. This Court has both the authority and the duty to address the entire interconnected surface and groundwater system in this adjudication.
